The preserved products have undergone a preservation process to maintain their beauty and freshness. Preservation is also a form of drying, although the result is different. The preservation technique allows flowers to maintain a completely natural appearance and feel, as if they were freshly-cut flowers.

## PROCESS

1 The flowers undergo a rehydration process by being placed in a mixture made from glycerine and other plant elements.

1

2 This liquid gradually rises through the trunk until it completely substitutes the sap.

2

3 After a few days, the process is complete and the plant is ready to be used.
